

The diagram shows five trees of different heights and positions relative to a ground line. The ground line is represented by a blue line with vertical segments. The trees are represented by green outlines with brown trunks. The first tree is the tallest and is on the left. The second tree is shorter and is to the right of the first. The third tree is the shortest and is to the right of the second. The fourth tree is taller than the third and is to the right of the fourth. The fifth tree is the tallest of the group and is on the far right. The ground line is higher under the first tree and lower under the others, suggesting a slope.
